

Project Setup Guide

Summary: Setting Up the Project

1) Clone the Branch

- Only download the needed branch from GitHub:

```
git clone --branch 25.10_DC48_UAT_ND --single-branch https://github.com/coachofanalytics/dev.git  
cd dev
```

2) Create & Activate Virtual Environment

- Create a Python virtual environment:

```
python -m venv venv
```

- Activate it (Windows):

```
venv\Scripts\activate
```

- You should see (venv) in the terminal.

3) Upgrade pip

```
python -m pip install --upgrade pip
```

4) Install Project Dependencies

```
pip install -r requirements.txt
```

5) Migrate Database

```
python manage.py migrate
```

6) Run the Server

```
python manage.py runserver
```

- Open project at: <http://127.0.0.1:8000/>

Done When:

- (venv) is active
- No pip errors during installation
- Server runs without errors

Project Setup Guide

- Website opens successfully

Tips:

- Execute one step at a time
- Read commands carefully before running
- Note errors exactly for troubleshooting
